CWFIS GeoNetwork catalogue (PROD)

Crown Fraction Burned

Crown Fraction Burned (CFB) is the estimated fraction of the forest canopy consumed in the passage of a fire. It varies between 0 and 1, where 0 indicates a surface fire only (the flames do not reach up into the canopy) and values above 0.9 indicate a high-intensity continuous crown fire.

Detailed information is found in the parent document, "Canadian Forest Fire Behaviour Prediction (FBP) System -- Daily Maps", linked above, and in Supplemental Information below.
