CWFIS GeoNetwork catalogue (PROD)

Fire Weather Index - FWI1987

The Fire Weather Index is a component of the Canadian Forest Fire Weather Index (FWI) System. It is an indicator of the intensity (and the size of flames) associated with a fire spreading through a conifer forest and is used as an indicator of the difficulty of control. Higher values indicate higher intensity and larger flames.

Values of 30 or higher indicate intense fire is possible, and 50 or higher common with fires where suppression is very difficult.

Detailed information is found in the parent document, "Canadian Forest Fire Weather Index (FWI) System -- Daily Maps", linked above. Additional information may also appear in Supplemental Information below.
