Fixed

Improved display of active and reported fire records on maps

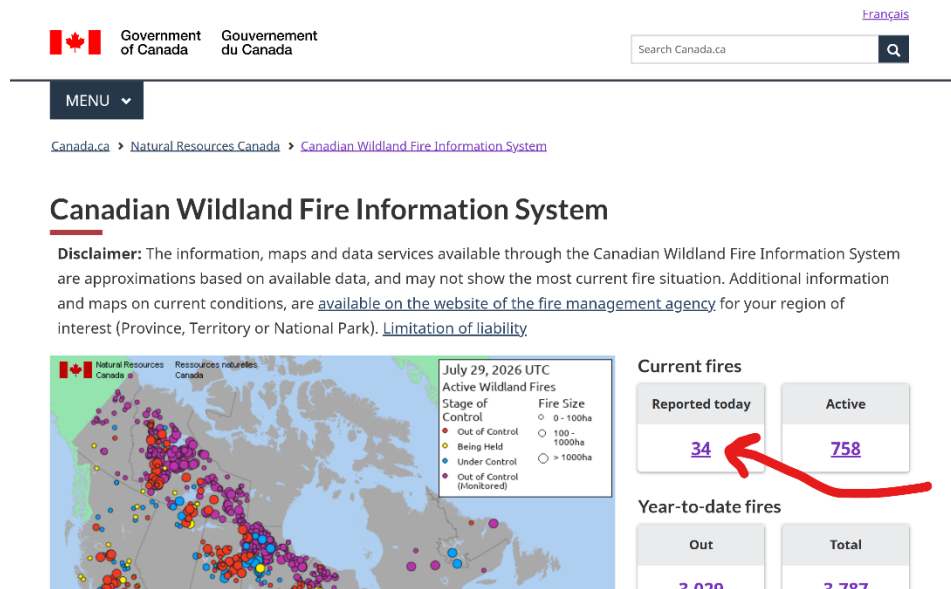

We resolved an issue affecting the Active Wildland Fires and Reported Wildland Fires maps where older records could appear above newer, more current records. The maps now prioritize the most current record available, helping ensure that users see the latest wildfire status.

Improved

More useful links from the Fire Panel

Based on feedback provided by a WIPs member, we've improved how links in the Fire Panel work. Previously, links directed users to the National Summary page but did not take them directly to the information they were looking for.

Links now navigate to the relevant section of the National Summary page and automatically scroll to the appropriate table or content. For example, selecting the Reported Today link will take you directly to the New Fires Reported table.

Statistics - Valid: July 29, 2026

New Fires reported

Human	Natural	Undetermined	Total
15	17	2	34

Year-to-date fire statistics

Status		Number of fires			Area (Ha)
		Active	Out	Total	
Full response	Out of control	90			
	Being held	27	2,661	2,874	1,021,105
	Under control	96			
Modified response		122	232	354	599,392

This change makes it easier to explore additional details behind the summary statistics presented on the home page.

Application maintenance and reliability improvements

Updated application packages and supporting libraries to improve reliability, maintainability, and overall platform stability.
